Hormone Replacement Therapy and Breast Cancer: A Case Control Study

by Md. Ziaul Islam

Is Hormone Replacement Therapy-Related Breast Cancer more? Aims: To investigate the presumed influence of hormone replacement therapy (HRT) on the progression of and death due to breast cancer.

Methods: In order to understand the influence of hormone replacement therapy (HRT) on the progression of breast cancer, we conducted a population-based case-control study in France. The study included 21 patients with breast cancer.

Results: HRT was not associated with increased risk for endometrial cancer, whereas combined estrogen plus progestin hormone therapy was not. Thus, if HRT is to be used in women with an intact uterus, this study confirms the benefit of adding progesterins to the regimen.

Case-control study of oestrogen replacement therapy and risk of cervical cancer: BMJ 1997 HRT does not increase risk of cervical cancer Panel issues advice on early detection of oral, breast, and cervical cancers in India. Case-Control Study of Increased Mammographic Breast Density.

1 Nov 2013: We conducted a population-based case-control study in France on risk of hormone replacement therapy on breast cancer risk. Is Hormone Replacement Therapy-Related Breast Cancer More? 22 Sep 2006: Long-term use of unopposed estrogen is associated with increased risk for endometrial cancer, whereas combined estrogen and progesterone therapy is not. Thus, if HRT is to be used in women with an intact uterus, this study confirms the benefit of adding progesterin hormone therapy.

Results: HRT was not associated with increased risk for endometrial cancer, whereas combined estrogen plus progestin hormone therapy was not. Thus, if HRT is to be used in women with an intact uterus, this study confirms the benefit of adding progesterins to the regimen.
